LAB PROGRAM- 18

18-08-2026

18. WRITE A PROLOG PROGRAM FOR A DB WITH NAME, DOB

AIM

To write and execute a Prolog program to create a database containing the names and dates of birth (DOB) of different persons. The program demonstrates how facts can be stored and queried in a Prolog database.

ALGORITHM

1. Start the program.
2. Define facts containing the name and date of birth of different persons.
3. Represent the date of birth using the predicate dob(Name, Date).
4. Store the required information as Prolog facts.
5. Query the database using the name of a person.
6. Retrieve and display the corresponding date of birth.
7. Stop the program.

PROLOG PROGRAM

% Write a Prolog program for a DB with Name and DOB.

dob(rahul, date(15, 3, 2003)).

dob(priya, date(22, 7, 2002)).

dob(amit, date(10, 12, 2004)).

dob(neha, date(5, 1, 2003)).

dob(kiran, date(18, 9, 2002)).

SAMPLE INPUT

?- dob(priya, DOB).

SAMPLE OUTPUT

DOB = date(22, 7, 2002).

RESULT

Thus, the Prolog program for creating a database containing names and dates of birth was successfully implemented. The required date of birth was successfully retrieved by querying the database with a person's name.
